

AI IS TOOL, NOT YOUR MIND

"THINK FIRST. USE SMART  
TOOLS LATER."

## What's Happening?

### Text:

College students are increasingly using AI tools like ChatGPT, Copilot, and Gemini to solve problems. While these tools are powerful, many students have stopped thinking logically or trying themselves — leading to poor understanding and lack of real skills.

## Why It's a Problem

### Points:

Students skip learning by copying AI answers  
Can't explain their logic in exams/interviews  
No practice = No progress  
Over-dependence weakens problem-solving skills

## How to Use AI the Right Way

### Tips:

Try solving problems on your own first  
Use AI only to check or clarify  
Understand the solution before using it  
Combine your thinking + AI support = Success

Your Brain is Still the Best  
Tool

Call to Action:

- \* Practice thinking. Build logic.
- \* Use AI as support — not as a shortcut!

“AI can assist, but only you can truly understand.”
